DATA CENTRE CAPABILITY

Project Brief

Whatever your data centre requirements from Tier 1—Tier 4, Stanton's have the specialist knowledge, in house resources and expertise to deliver your mission critical solutions—tailored to your specific requirements.

Your data centre is the heart of your organisations information flow and whether you are setting up a new facility or upgrading an existing one, Stanton's can offer a total or partial project solution.

Solutions

Noteable projects we have worked on recently include :

Sentrum V— Rugby

A Tier 2 disaster recovery suite complete with 50,000 Sq ft of data space built for use by Hewlett Packard. This scheme was completed in only 12 weeks as part of Sentrums fast track project system

Local Authority—Confidential

This scheme involved the refurbishment of an existing building which had previously been used as a call centre by a large mobile phone network provider. A Tier 3 centre with 80,000 Sq ft of data space, to consolidate the authorities various data sites into one location. We saved the client approximately £150k in potential new switchgear by re-designing and re-utilisation of the existing equipment.

American Express—Brighton

Working in conjunction with a lead consortium, we provided a detailed design for the new Tier 4 data facility in Brighton. The scheme was completed to RIBA Stage E.

All of our designs are carried out with a view to reducing the large energy consumption inherent in a data facility and off setting this to reduce the overall carbon footprint.
