

Summary

Client
Flowcrete

Location
Sandbach

Project Value
£1.5m

Contract Start
May 2008

Contract Completion
April 2010

Flowcrete HQ

Project Brief

The client was looking to re-develop existing industrial buildings into modern, energy efficient offices, which, whilst serving as their world H.Q. would allow them to showcase their own products.

Through innovative design solutions, we were able to totally eliminate the need for traditional gas fired boilers.

Our solution included the use of reversible Air Source heat pumps, which also provided cooling for the building from its own waste heat.

The building was also naturally ventilated and achieved the Royal seal of approval when it was officially opened by the Duke of Gloucester.

The energy consumption of the building was reduced by 93% when compared directly to the previous offices on the same site.
